Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Remarks***

According to the Pre-Amendment filed on 6/13/2001, claims 1-11 have been cancelled and new claims 12-20 have been added (Applicant is noted that there are 9 newly added claims 12-20, not claims 12-22). Now only claims 12-20 are examined in the present invention.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 12-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Hirasawa (US 6,473,797)

Hirasawa, according to Figs. 1-5, shows an information processing apparatus comprising all features of the claimed invention as interpreted below:

Regarding claim 12, see Figs. 1-5 which show an information processing apparatus (see Fig. 1) for carrying out transmission and reception of information with electronic equipment through network comprising: acquisition means (see control unit in Fig. 2) for carrying out acquisition of control information necessary for carrying out control of the electronic equipment from the electronic equipment; detecting means (see control unit 208) for detecting identification data recorded on a recording medium mounted on the electronic equipment on the basis of the control information acquired by the acquisition means; input means (see console 207) for inputting related information relating to the recording medium; memory means (see memory

Art Unit: 2653

209) for storing the related information inputting by the input means in correspondence with the identification data; comparing means (see data selector 210) for comparing the identification data recorded on the recording medium with the related information inputting by the input means; and display means (see monitor 212) for carrying out display of the related information stored in the memory means.

Regarding claim 13, see Figs. 1-3 which show an information processing apparatus wherein the acquisition of the control information (see ports 109 and IEEE-1394 110) is carried out when the electronic equipment is connected to the network.

Regarding claim 14, see Figs. 1-3 which show an information processing apparatus wherein the network is constituted by IEEE 1394 bus (see 1394 interface and bus cables 110).

Regarding claim 15, see Figs. 1-21 which show an information processing apparatus wherein the detecting means (see control unit 208) detects the identification data through the network.

Regarding claim 16, see Figs. 1-5 which show an information processing apparatus wherein the identification data (see recording medium 201) is TOC data.

Regarding claim 17 and 18, see the rejection applied to claim 12.

Regarding claim 19, see Figs. 1-21 which show an information processing method wherein the recording medium is a reproduction only recording medium.

Regarding claim 20, see the rejection applied to claim 15.
